PRIORITY · E-COMMERCE

PORTFOLIO 2026

# FIRAS KOUKI

**E-commerce Specialist who builds and runs Shopify and eBay storefronts for a Canadian liquidation retailer.**

I turn messy weekly supplier manifests into clean, accurate listings, keep two sales channels in sync, ship the orders, and handle returns and feedback.

PACKING SLIP · WHAT E-COMMERCE ROLES ASK FOR

# EVERYTHING ON THE CHECKLIST, IN THE BOX

The core duties of an e-commerce role, matched to where I already do them. **WEB** is the Shopify website and **EBAY** is the eBay store.

| ✓ | THE ROLE CALLS FOR | WHERE I DO IT TODAY |
|---|---|---|
| ☑ | **Maintain listings, collections, prices, descriptions and images** | WEB Publish supplier manifests across four channels, checking titles, prices, conditions and photos. EBAY Write titles, item specifics, condition notes and photos for every listing. |
| ☑ | **Coordinate launches, promotions and storefront updates** | WEB Ran the storefront redesign and the French/Arabic launch with owner sign-off; new stock goes live together via "Publish all". EBAY Set up offers, markdown sales and promoted listings. |

| | | |
|---|---|---|
| ☑ | **Monitor orders and inventory; resolve fulfilment and returns** | WEB Shopify orders flow into the admin; I keep the inventory report and pickup hours for all 10 locations. EBAY Pack, ship, add tracking, answer buyers, and handle returns and cases. |
| ☑ | **Track traffic, conversion, sales and product performance** | WEB Analytics and error monitoring are set up, and a daily feed keeps Google Shopping prices and stock current. EBAY Watch sell-through and feedback to decide what to mark down. |
| ☑ | **Improve product pages, on-site search and merchandising** | WEB Built typo-tolerant search, savings badges vs MSRP, "New" badges, and grouped lots that show "10 available". |
| ☑ | **Test checkout and promotional changes before they go live** | WEB An automated browser test walks from a listing to Shopify checkout before changes ship. |
| ☑ | **Spreadsheets, product data and reporting tools** | WEB Manifests are Excel sheets (ASIN, UPC, units, retail); uploads are checked against the sheet's TOTALS row before anything publishes. |

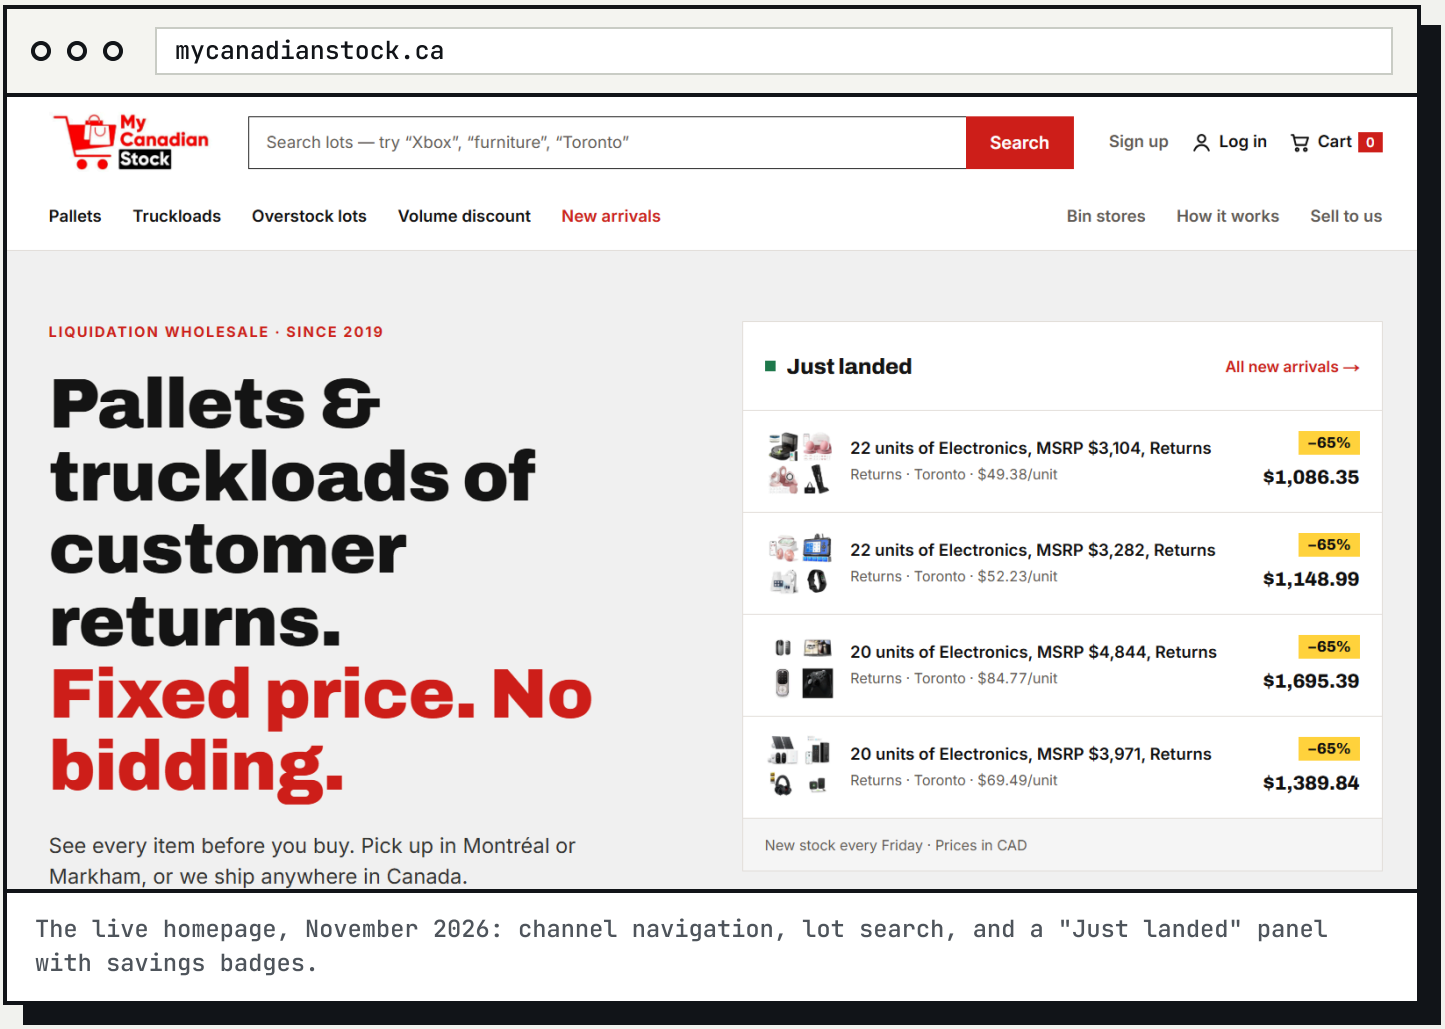

PALLET 01 Shopify website

# MY CANADIAN STOCK

A Canadian liquidation retailer selling Amazon returns and overstock by the pallet, truckload, lot and unit, with bin stores across Québec and a location in the Toronto area. I built its online store and run it every day.

| | |
|---|---|
| MY ROLE | Contract builder for the owner, and day-to-day store operator |
| PLATFORM | Shopify for products, checkout, orders and customers, behind a custom storefront |
| SINCE | July 2026 |

Visit mycanadianstock.ca ↗

The live homepage, November 2026: channel navigation, lot search, and a "Just landed" panel with savings badges.

THE WEEKLY CATALOGUE RUN

## From supplier spreadsheet to Google Shopping

**1**

**Manifest arrives**

Excel sheet: ASIN, UPC, units, retail value, plus a TOTALS row

**2**

**Upload & preview**

Item count and totals checked against the sheet before anything is saved

**3**

**Hidden drafts**

Photos matched by ASIN; drafts with placeholder text can't publish

**4**

**Publish all**

The whole drop goes live together, grouped into clean cards

**5**

**Everywhere**

On the website and in Google Shopping withi 24 hours

ON-SITE SEARCH

### Search that still works when customers misspell things

Product titles from suppliers are long; customer searches are short. A popular fuzzy-search library ranked badly on this data, so I tested it against the real catalogue and replaced it with word-by-word matching. Try the comparison:

mowse

| | | |
|---|---|---|
| 1 | Wireless Optical Mouse 2.4GHz | MOUSE |
| 2 | Gaming Mouse RGB 7200 DPI | MOUSE |
| 3 | Ergonomic Vertical Mouse | MOUSE |
| 4 | Mouse Pad XL Extended | CLOSE |

Word-by-word matching: "mowse" lands on mice first. Example titles, same ranking behaviour I verified on the real catalogue.

MERCHANDISING

### A big, messy catalogue made easy to shop

- Savings badges against MSRP
- "New" badges that expire on their own
- Ten identical pallets show as one card: "10 available"
- Minimum order rules so stock doesn't get stuck as odd leftovers

ORDERS & STORES

### Orders, inventory and pickup

- Shopify orders arrive in the admin automatically
- Inventory report exports to Excel
- Hours and phones for 10 locations match Google Business Profiles
- New-stock email alerts for customers

REACH

### Google Shopping, SEO, three languages

- Daily Merchant Center feed, built because Shopify's Google channel pointed to the wrong storefront
- Price and stock data shown in Google results
- French and Arabic versions, right-to-left layout included

TESTING

### Checked before customers see it

- Automated browser test from listing to Shopify checkout
- Checks on manifest parsing, quantity rules, search and translations
- Security pass on forms and cart, with spam filtering

PALLET 02 eBay store

# KRAZYDEALS LIQUIDATION

My Canadian Stock's eBay channel, reaching buyers across Canada who don't shop the website. I run the account end to end, from listing to feedback.

LISTINGS

## Listings buyers can trust

Keyword-led titles and complete item specifics so items surface in eBay search and filters. Returned goods vary, so every listing states the condition plainly, with photos of what the buyer actually gets.

PRICING

## Pricing and promotions

Prices set against retail value and what similar items sell for. Best Offer, markdown sales and promoted listings keep slow stock moving.

FULFILMENT

## Orders, returns and feedback

I pack and ship, upload tracking, answer buyer questions, and handle return requests and cases. 373 ratings at 98.9% positive is the result.

TWO CHANNELS, ONE CATALOGUE

## Kept in sync with the website

Both stores use the same supplier manifest data, so an item is described and priced consistently wherever a customer finds it. Running several storefronts at once is something I already do every day.

HOW I WORK

# CLEAR WITH PEOPLE, CAREFUL WITH DATA

WITH THE OWNER

### Nothing goes live without sign-off

Design direction, store hours, translation choices and the redesign were each approved by the owner first. I keep a written design guide so later changes match what was approved.

WITH OTHER TEAMS

### Handovers anyone can follow

When another developer needed to connect the owner's manifest software, I wrote the steps plainly: what to send, where, how to keep the key safe, and what the user sees on success or error.

PLATFORMS & TOOLS

Shopify admin
Shopify checkout & orders
eBay Seller Hub
eBay promoted listings
Google Merchant Center
Google Business Profile

Automated checkout tests
Next.js & TypeScript
Git & GitHub

READY FOR DISPATCH

# LET'S TALK

Sales and traffic figures for the website belong to the owner and aren't published here. I'm glad to walk through the website, the eBay account and my weekly manifest workflow in an interview.
